

Gait Assessment Score

(GAS)

GAS	Gait Evaluation
0	Normal, neurologic deficits not detected.
1	Neurologic deficits may be detectable at normal gaits; exacerbated with manipulative procedures (e.g., backing, turning in tight circles, walking with head elevation, etc.).
2	Neurological deficit obvious at normal gaits or posture; signs exacerbated with manipulative procedures.
3	Neurological deficit obvious at normal gaits; horses give the impression that they may fall (but do not) and buckle or fall with manipulative procedures.
4	Neurologic deficit is profound at normal gaits; horse frequently stumbles or trips and may fall and normal gaits when manipulative procedures are utilized.
5	Recumbent, unable to rise.
